List of the birds of Spain

Since the previous "List of the Birds of Spain" (de Juana, Gutiérrez & Lorenzo, 1998) was first published, a remarkable number of new species have been observed and properly documented, and important taxonomic changes have been accepted in Europe. These circumstances have recommended a review and a thorough update of the Spanish list, for which task a commission formed by members of the Group of Exotic Birds and the Spanish Rarities Committee was created in 2003. The result of its work is this new official list of the Spanish Ornithological Society (SEO-Birdlife).

All the species for which trustworthy records in Spain exist are listed by families. The inclusion of accidental or occasional species ("rarities") in category A (see below) has required the existence of records studied and accepted by the Rarities Committee and published in their annual rarities reports. This limitation has not applied to species in category B, although the Rarities Committee also aspires to study such records as far as possible and to determine whether or not they should figure in the list in future.

Scientific, Castilian (Spanish), English, Catalan, Galician and Basque names are given for each species. The Castilian names are based on Bernis (1954), with subsequent changes recommended by the Spanish Ornithological Society (Bernis *et al.* 1994 *et seq.*). The English names are those adopted by the British Ornithologists' Union (2000). The Galician names are those gathered by Conde Teira (1999), with some additional species from Pains *et al.* (2004). The names in Basque follow Aizpurua & Etxaide (1984) and Iribar *et al.* (2002). The Catalan names are provisional, pending an ongoing project to establish a list common to all the catalan-speaking areas: those used here are mainly from Clavell (2002) and also apply to the Balearic Islands and the Valencia region.

The taxonomic arrangement and the scientific names follow the recent recommendations of the taxonomic committee of the *Association of European Record and Rarities Committees* (AERC TAC, 2003), updating Voous (1977). The most important changes are the placing of the orders Anseriformes and Galliformes (*Galloanserae*) at the head of the list, followed by the other orders (Neoaves), of more recent evolutionary origin.

With respect to the previous version of the list, other important changes are the inclusion of over 20 new species and the

withdrawal of some others, as well as the updating and revision of the Categories. The territories included have been amended to cover all Spanish territory, now omitting Gibraltar (see a list of the Gibraltar birds at the GONHS website <http://www.gonhs.org> and updates at the Gibraltar Bird Report) but including the north African autonomous territories of Ceuta and Melilla. A fuller explanation of the changes underlying this list may be consulted in Clavell et al. (2005).

Symbol Key

The letters or abbreviations located to the left of the species' names give a diversity of information on each. They are arranged as follows:

The first column (extreme left) gives the Categories used by the Exotic Birds Group and the Rarities Committee of the Spanish Ornithological Society. These were developed initially by the British Ornithologists' Union for the British Isles and have been adopted for Europe by the AERC and by different countries. The Category definitions are:

Category A

Species that have been recorded in an apparently natural state at least once since 1 January 1950.

Category B

Species that have been recorded in an apparently natural state at least once before 31 December 1949, but not subsequently.

Category C

Species that, having been introduced or reintroduced deliberately or accidentally to the region, have established self-sustaining populations

C1 *Naturalised Introductions* Species that are present as a result of an introduction

C2 *Partial Naturalisations* Species whose populations are

established as a result of an introduction but which also occur in an apparently natural state.

C3. *Reintroductions* Species with successfully reintroduced populations in areas of former occurrence.

C4 *Feral Species* Domestic species (products of artificial selection) with free-living naturalised populations.

C5 *Vagrant Naturalised Species* Species from established naturalised populations abroad.

Category D

Species that would otherwise appear within categories A or B except that there is a reasonable doubt that they have ever occurred in a natural state. They do not contribute to the species total nor are they included in the list.

Category E

Species that, having been introduced or reintroduced either deliberately or accidentally by humans in the region, have not established self-sustaining populations. They are not included in the main list of the birds of Spain.

E1 Species whose reproduction in the wild has been verified regularly and which may become naturalised. The species in this subcategory need special monitoring to consider their possible future inclusion in category C.

E2 Species whose reproduction in the wild has been verified irregularly or occasionally, without any indication that they are in the process of becoming established.

E3 Species only observed occasionally and not known to have reproduced in the wild.

The categories allocated to each species refer to their situation in the whole of Spain. The official list is formed solely by categories A, B and C. The species within category D are arranged in an annex to the List for information and to encourage further study to establish their definitive categorisation. The E category list is available on the

SEO website (<http://www.seo.org>)

In the second column

- The following letters are used to indicate in which territories a species breeds.: **P** Mainland Spain; **B** Balearic islands; **C** Canary islands; **N** North African autonomous territories of Ceuta and Melilla.
- If the species is **a rarity**, that is to say one for which are still few records in Spain because it appears only accidentally or very seldom (vagrant birds *sensu lato*), the total number of records accepted by the Rarities Committee up to the year 2002 is given (de Juana *et al.* 2004). This total is given as two figures separated by a comma. The first figure gives the total number of records for the Spanish mainland and the second for the Canarian archipelago: **'0'** indicates that there are no accepted records and **'x'** that a species is not a rarity in the region. The territory letter (see above) replaces the **'x'** where a species breeds in the one of the two regions

In **the third column** the names in Spanish in **bold** indicate that the species is not a rarity in at least some of the territories included in the list.

THE PUBLICATION OR THE INCLUSION IN SCIENTIFIC PAPERS OR ARTICLES OF ANY RECORDS WHICH HAVE NOT BEEN ACCEPTED BY THE SPANISH RARITIES COMMITTEE (CR-SEO) IS NOT RECOMMENDED

Acknowledgements:

The collaboration of Gorka Gorospe and Rafael Sáiz in the compilation and revision of the names in Basque (Euskera), and of Miguel Conde Teira in his complete revision of the Galician names is appreciated. We are also grateful to César Vidal for his collaboration in the latter and to Ernest F.J.Garcia for the English version of this introduction.
